" About Me

Proven ability to deliver high quality code and collaborate effectively within cross functional teams. Excellent problem-solving skills and a strong commitment to continuous learning and professional growth.

Profile Summary

Experienced UI Angular and Backend Java Developer with a proven track record of delivering robust and efficient web applications. Proficient in leveraging Angular framework to create dynamic and responsive user interfaces that enhance user experience. Skilled in Java development, adept at designing and implementing scalable backend solutions to support complex business logic. Adept at collaborating with cross-functional teams to analyze requirements, architect solutions, and deliver high-quality software products. Passionate about staying updated with the latest technologies and best practices in software development to drive innovation and achieve business objectives.

Education

2022, Full Time

B.Tech/B.E., Computers
Rajiv Gandhi Proudyogiki Vishwavidyalaya (RGPV), Bhopal , 8.36/10

Work Experience

2022 - Present
Development Engineer
Calsoft

City	Darbhanga
Country	INDIA
Marital Status	Single / Unmarried

Key Result Area

As a UI Angular and future backend Java developer, my job profile involves a diverse set of responsibilities encompassing both front-end and back-end development. Here's a breakdown of what my role entails:

UI Development with Angular: I design and develop user interfaces using Angular, a popular front-end framework. This involves creating responsive, interactive, and visually appealing web applications that offer an excellent user experience. I work closely with designers to implement their vision and ensure that the UI aligns with user requirements and business objectives.

Angular Component Development: I build reusable Angular components to streamline development and ensure consistency across the application. This includes designing components for various functionalities such as forms, navigation menus, data displays, and interactive elements.

Front-end Optimization: I optimize the front-end codebase for performance, ensuring fast loading times and smooth user interactions. This involves techniques such as lazy loading, code splitting, and minification to reduce load times and improve overall responsiveness.

Integration with Back-end Services: While currently focused on UI development, I'm preparing for future responsibilities in backend Java development. This involves understanding how the front-end interacts with back-end services and APIs. I collaborate with backend developers to define API contracts and ensure seamless integration between the UI and server-side components.

Learning Java for Backend Development: As part of my career development, I'm acquiring proficiency in Java programming language and related frameworks for backend development. This includes learning concepts such as RESTful API development, database integration, security, and server-side architecture.

Full-Stack Development (Future Growth): With proficiency in both front-end (Angular) and back-end (Java) technologies, I aim to transition into a full-stack development role. This would involve taking ownership of end-to-end development tasks, from designing user interfaces to implementing server-side logic and database interactions.

Continuous Learning and Skill Enhancement: In the rapidly evolving field of software development, I prioritize continuous learning to stay updated with the latest trends, tools, and best practices. This involves self-study, attending workshops, participating in online courses, and collaborating with colleagues to share knowledge and insights.

In summary, my job profile as a UI Angular and future backend Java developer revolves around creating engaging user interfaces, integrating them with backend services, and preparing for a transition into full-stack development by acquiring proficiency in Java and related technologies.

💼 Projects

353 Days

Cisco UCS Manager vCenter Remote Plugin

Working on transforming VMware VCenter local plugin to a remote plugin which was developed using Angular. It involved transformation as per new architecture. Used VMWare Clarity framework as a fronend framework. In this project i worked as senior resource. And many more....

749 Days

Cisco HyperFlex HTML plugin for VMWare vCenter

Development of new component in Angular. Writing new and fixing existing validations. Fixing Bugs. Development of Login page and Registration page, consuming JWT token, authenticating user manage session. And many more..

1 Months

SkillSync

Over the past few months, I've dedicated my time to creating an application that I believe holds great promise in enhancing our team's collaboration and problem-solving abilities.The application, built using Angular for the frontend and Java with Spring Boot for the backend, aims to streamline communication, facilitate knowledge sharing, and empower team members to solve problems more efficiently.

Here's how SkillSync can benefit our team:

Knowledge Discovery: Team members can search for experts or resources related to specific topics, such as Angular, Java, or any other area of expertise.

Expert Matching: When a team member encounters a problem or needs guidance on a particular topic, SkillSync will suggest potential experts within the team who can provide assistance based on their knowledge and experience.

And many more..
